

Green Slope™

Allan Block's Planter Wall

AB Green Slope™ combines the structural integrity and versatility of segmental retaining wall blocks with the beauty and appeal of a plantable wall system. The open-back design allows for plant growth and the natural drainage of water. Once planted with vines, flowers or other greenery, AB Green Slope™ becomes part of the natural landscape.

- Natural Looking Retaining Wall Solution
- Environmentally Friendly
- Aesthetically Pleasing
- In Harmony With The Landscape
- Manages Runoff

Green Slope™

The AB Green Slope™ Retaining Wall System offers landscape and engineering professionals a plantable wall system that can accommodate almost any terrain.

Developers and property owners can create functional and aesthetically pleasing site solutions that blend curved or straight walls into the natural contours of the landscape.

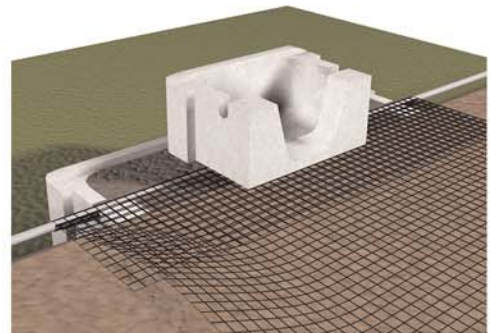

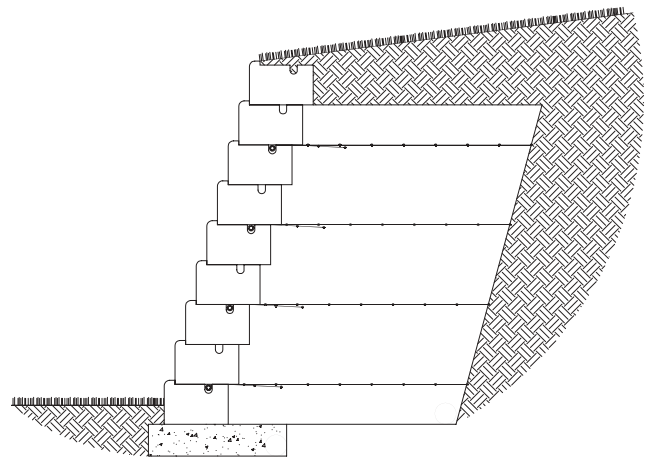

AB Green Slope™ blocks are unique in that an open cavity in each block permits the placement of top soil within the wall where vegetation and plantings are allowed to grow. AB Green Slope's™ block design allows for 100% grid coverage throughout the entire wall and the interlocking front lip prevents the top soil within the blocks from eroding.

- Integrates with geosynthetic soil reinforcement materials
- Continuous grid placement – a superior interlocking system
- 90 lb block makes installation easier than other large-block wall systems
- Built-in drainage
- Variable setback angle
- Flexible design options with curved and straight walls
